Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a), which forms the basis for all obviousness rejections, set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this bill. If the differences between the subject matter sought to be patented and the prior are such that the subject matter so as whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter portains. Patentibality shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1-6 are rejected under 35 U.S.C. 103 (a) as being unpatentable over JP 2001-31629 in views of Tomishige et al.

The claimed invention is drawn to a catalyst for preparing dimethyl carbonate from acetone dimethyl acetal and CO2.

Determination of the scope and content of the prior art (MPEP §2141.01)

Application/Control Number: 10/553,267

Art Unit: 1626

JP 2001-31629 A teach a process of preparing carbonic esters by reacting carbon dioxide with an acetal compound in the presence of tin oxide. Tomishige et al teach Zirconia catalysts for direct synthesis of dimethyl carbonate from methanol and carbon dioxide.

Ascertainment of the difference between the prior art and the claims (MPEP §2141.02)

The difference between JP 2001-31629 A and the instant process is that tin oxide is used as a catalyst in the JP '629 reference as opposed to zirconium compound as in the present invention. Tomishige et al however teach Zirconia catalysts for direct synthesis of dimethyl carbonate from methanol and carbon dioxide.

Finding of prima facie obviousness-rational and motivation (MPEP §2142-2413)

Therefore, one of ordinary skill in the art would take the zirconium compound catalyst of Tomishige et al. and modify the catalyst of JP 2001-31629 A with a reasonable expectation of success. The motivation to combine the references is that both catalysts are used for the preparation of carbonate compounds. The instant claimed catalyst used in the process would have been obvious because the product obtained in both cases is the same. Therefore, the instant claimed catalysts would have been suggested to one skilled in the art.
